

ABSTRACT of the DISCLOSURE.

The apparatus comprises a first telescopic arm, exhibiting a lower portion rotatably constrained to a first horizontal hinge axis, a first motor for rotating the first telescopic arm; a second telescopic arm rotatably constrained to an upper portion of the first telescopic arm which upper portion is aligned with
5 a longitudinal axis of the first telescopic arm at a second horizontal hinge axis; a terminal load support group for a load mounted on the second telescopic arm and a second motor for rotating the second telescopic arm.
